18V PRUNER SAW

DCMPS520

Congratulations!

You have chosen a DeWALT tool. Years of experience, thorough product development and innovation make DeWALT one of the most reliable partners for professional power tool users.

Technical Data

DCMPS520		
Voltage	V _{DC}	18
Type		1
Battery type		Li-Ion
Bar Length	cm	20
Maximum Chain Speed (no-load)	m/s	8.6
Maximum Cutting Length	cm	15
Oil Capacity	ml	55
Weight (without battery pack)	kg	2.1

Noise values and vibration values (triax vector sum) according to EN62841-4-1:

L _{PA} (emission sound pressure level at no load)	dB(A)	84
L _{WA} (sound power level at no load)	dB(A)	92
K (uncertainty for the given sound level)	dB	3.0
Vibration emission value a _h =	m/s ²	4.7
Uncertainty K =	m/s ²	1.5

The vibration and/or noise emission level given in this information sheet has been measured in accordance with a standardised test given in EN62841 and may be used to compare one tool with another. It may be used for a preliminary assessment of exposure.

WARNING: The declared vibration and/or noise emission level represents the main applications of the tool. However, if the tool is used for different applications, with different accessories or is poorly maintained, the vibration and/or noise emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration and/or noise should also take into account the times when the tool is switched off or when it is running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration and/or noise such as: maintain the tool and the accessories, keep the hands warm (relevant for vibration), organisation of work patterns

EC-Declaration of Conformity

Machinery Directive

Pruner Saw DCMPS520

DeWALT declares that these products described in the
Technical Data are in compliance with:

2006/42/EC, EN62841-1:2015+A11:2022, VDE 0113-1

EC type-examination certificate number: 2019/0012

VDE Prüf- und Zertifizierungsins

Merianstraße 28, 63069 Offenbach

Notified Body number : 0102

ID number: 4005673

2000/14/EC, Annex I

L_{WA} (measured sound power level)

L_{WA} (guaranteed sound power level)

These products also comply with Directive 2000/14/EC, Annex I
2011/65/EU. For more information, please contact the manufacturer at
the following address or refer to the back of the information sheet.

The undersigned is responsible for compilation of this declaration of conformity
file and makes this declaration on behalf of DeWALT-USA, Inc.

Markus Rompel

WARNING: To reduce the risk of injury

read the instruction manual.

Definitions: Safety Guide

The definitions below describe the level of severity of the hazard and the associated signal word. Please read the manual and pay attention to these symbols.

DANGER: Indicates an imminently hazardous situation which, if not avoided, will result in serious injury.

WARNING: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

English

GENERAL POWER TOOL SAFETY WARNINGS

WARNING: Read all safety warnings, instructions, illustrations and specifications provided with this power tool. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury.

SAVE ALL WARNINGS AND INSTRUCTIONS FOR FUTURE REFERENCE

The term "power tool" in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1) Work Area Safety

- a) Keep work area clean and well lit. Cluttered or dark areas invite accidents.*
- b) Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.*
- c) Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.*

2) Electrical Safety

- a) Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.*
- b) Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.*
- c) Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.*
- d) Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.*
- e) When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.*
- f) If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.*

3) Personal Safety

- a) Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the*

- c) Prevent unintentional starting. Ensure the switch is in the off position before connecting to the power source and/or battery pack, picking up the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.*
- d) Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.*
- e) Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.*
- f) Dress properly. Do not wear loose clothing or jewellery. Keep your hair and clothing away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.*
- g) If devices are provided for the connection of dust extraction and collection facilities, these must be connected and properly used. Use of dust extraction can reduce dust-related hazards.*
- h) Do not let familiarity gained from frequent use of power tools allow you to become complacent and ignore tool safety principles. A careless action can result in injury within a fraction of a second.*

4) Power Tool Use and Care

- a) Do not force the power tool. Use the correct tool for your application. The correct tool will do the job better and safer at the rate for which it was designed.*
- b) Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be turned on with the switch is dangerous and must be repaired.*
- c) Disconnect the plug from the power source before servicing or remove the battery pack, if detachable, before servicing the power tool before making any adjustments, changing accessories, or storing power tools. These preventive safety measures reduce the risk of injury from power tool accidentally.*
- d) Store idle power tools out of the reach of children, and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained persons.*
- e) Maintain power tools and accessories properly. Check for misalignment or binding of moving parts, breakage or damaged parts and any other condition that may affect the power tool's operation. If damaged, the power tool must be repaired before use. Many accidents are caused by poorly maintained power tools.*

- h) Keep handles and grasping surfaces dry, clean and free from oil and grease. Slippery handles and grasping surfaces do not allow for safe handling and control of the tool in unexpected situations.*

5) Battery Tool Use and Care

- a) Recharge only with the charger specified by the manufacturer. A charger that is suitable for one type of battery pack may create a risk of fire when used with another battery pack.*
- b) Use power tools only with specifically designated battery packs. Use of any other battery packs may create a risk of injury and fire.*
- c) When battery pack is not in use, keep it away from other metal objects, like paper clips, coins, keys, nails, screws or other small metal objects, that can make a connection from one terminal to another. Shorting the battery terminals together may cause burns or a fire.*
- d) Under abusive conditions, liquid may be ejected from the battery; avoid contact. If contact accidentally occurs, flush with water. If liquid contacts eyes, additionally seek medical help. Liquid ejected from the battery may cause irritation or burns.*
- e) Do not use a battery pack or tool that is damaged or modified. Damaged or modified batteries may exhibit unpredictable behaviour resulting in fire, explosion or risk of injury.*
- f) Do not expose a battery pack or tool to fire or excessive temperature. Exposure to fire or temperature above 130 °C may cause explosion.*
- g) Follow all charging instructions and do not charge the battery pack or tool outside the temperature range specified in the instructions. Charging improperly or at temperatures outside the specified range may damage the battery and increase the risk of fire.*

6) Service

- a) Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.*
- b) Never service damaged battery packs. Service of battery packs should only be performed by the manufacturer or authorised service providers.*

Pruner Safety Warnings

- a) Keep all parts of the body away from the saw chain when the pruner is operating. Before you start the pruner, make sure the saw chain is not contacting anything. A moment of inattention while operating*

Saw chains contacting a "live" wire may cause the metal parts of the pruner "live" and could cause an electric shock.

- d) Wear safety glasses and hearing protective equipment for, head, hands and feet is recommended. Adequate protection to reduce personal injury from flying debris in contact with the saw chain.*
- e) Do not operate a pruner saw in a tree, from a rooftop, or any unstable surface. Use of a pruner saw in this manner could result in personal injury.*
- f) Always keep proper footing and only when standing on fixed, secure surface. Slippery or unstable surfaces may affect balance or control of the pruner.*
- g) When cutting a limb that is under tension for spring back. When the tension in the limb is released, the spring loaded limb may snap back and/or throw the pruner out of control.*
- h) Use extreme caution when cutting saplings. The slender material could catch and be whipped toward you or pull you toward it.*
- i) Carry the pruner with the pruner switch away from your body. When transferring the pruner always fit the guide bar correctly. Improper handling of the pruner will reduce the likelihood of accidental contact with the moving saw chain.*
- j) Follow instructions for lubricating, cleaning and changing the bar and saw chain. An over-tensioned or lubricated chain could break and damage the pruner chain.*
- k) Keep handles dry, clean, and free from oil and grease. Greasy, oily handles and surfaces may cause loss of control.*
- l) Cut wood only. Do not use pruner for other purposes. The pruner is not intended. For example: do not use on metal, plastic, masonry or non-wood materials. Use of the pruner for other purposes not intended could result in a hazardous situation.*
- m) Maintain a firm grip, with thumbs encircling the pruner handles, with the pruner. Maintaining control of the pruner will reduce the risk of losing control. Do not use the pruner.*
- n) Do not overreach and do not cut above shoulder height. This enables better control of the pruner.*

English

- q) *This pruner is not intended for tree felling. Use of the pruner for operations different than intended could result in serious injury to the operator or bystander.*
- r) *Follow all instructions when clearing jammed material, storing or servicing the pruner saw. Make sure the switch is off and the battery pack is removed.*

Causes and Operator Prevention of Kickback:

Kickback may occur when the nose or tip of the guide bar touches an object, or when the wood closes in and pinches the saw chain in the cut.

Tip contact in some cases may cause a sudden reverse reaction, kicking the guide bar up and back towards the operator.

Pinching the saw chain along the top of the guide bar may push the guide bar rapidly back towards the operator.

Either of these reactions may cause you to lose control of the saw which could result in serious personal injury. Do not rely exclusively upon the safety devices built into your saw. As a pruner user, you should take several steps to keep your cutting jobs free from accident or injury.

Kickback is the result of tool misuse and/or incorrect operating procedures or conditions and can be avoided by taking proper precautions as given below:

- a) *Maintain a firm grip, with thumbs and fingers encircling the pruner handles, with both hands on the saw and position your body and arm to allow you to resist kickback forces. Kickback forces can be controlled by the operator, if proper precautions are taken. Do not let go of the pruner.*
- b) *Do not overreach and do not cut above shoulder height. This helps prevent unintended tip contact and enables better control of the pruner in unexpected situations.*
- c) *Only use replacement bars and chains specified by the manufacturer. Incorrect replacement bars and chains may cause chain breakage and/or kickback.*
- d) *Follow the manufacturer's sharpening and maintenance instructions for the saw chain. Decreasing the depth gauge height can lead to increased kickback.*

The Following Precautions Should Be Followed to Minimize Kickback:

- 1 . *Grip saw firmly. Hold the pruner firmly with both hands when the motor is running. Use a firm grip with thumbs and fingers encircling the pruner handles. Pruner will pull forward when cutting on the bottom edge of the bar, and push backward when cutting along the top edge of the bar.*
- 2 . *Do not over reach.*
- 3 . *Keep proper footing and balance at all times.*

- 8 . *Never let the moving saw chain contact a tip of the guide bar.*
- 9 . *Keep the working area free from obstructions such as other trees, branches, rocks, fences, etc. Eliminate or avoid any obstruction that you may hit while you are cutting through a particular area.*
- 10 . *Keep your saw chain sharp and properly tensioned. A loose or dull chain can increase the chance of kickback. Check tension at regular intervals with the motor unplugged, never with the motor running.*
- 11 . *Begin and continue cutting only with the motor at full speed. If the chain is moving at a slower speed, there is a greater chance for kickback to occur.*
- 12 . *Cut one log at a time.*
- 13 . *Use extreme caution when re-entering a cut. Engage the ribbed bumpers 21 onto the log and allow the chain to reach full speed before proceeding.*
- 14 . *Do not attempt plunge cuts or bore cuts.*
- 15 . *Watch for shifting logs or other forces that may cause the cut and pinch or fall into chain.*

Kickback Safety Features

WARNING: The following features are designed to help reduce the hazard of kickback. These features will not totally eliminate this danger. As a pruner user do not rely only on safety features. You must follow all safety precautions, instructions and maintenance in this manual to help avoid accidents and other forces which can result in serious injury.

- *Reduced-Kickback Guide Bar, designed with a reduced tip which reduces the size of the kickback danger zone at the bar tip. A reduced-kickback guide bar is one which has been demonstrated to significantly reduce the seriousness of kickbacks when tested in accordance with requirements for electric pruners.*
- *Low-Kickback Chain, designed with a control link and guard link which deflects kickback forces to gradually ride into the cutter. A low-kickback chain has met kickback performance requirements B175.1–2012.*
- *Do not operate pruner while in a tree, on a ladder, or from any unstable surface.*
- *Hold tool by insulated gripping surfaces when performing operation where the cutting tool may contact an energized "live" wire. Contact with a "live" wire will make exposed metal tool "live" and shock the operator.*
- *Do not attempt operations beyond your capabilities. Read thoroughly and understand completely all instructions in this manual.*
- *Before you start pruner, make sure saw chain is properly*

- Do not cut vines and/or small under-brush.
- Use extreme caution when cutting small size brush and saplings because slender material may catch the saw chain and be whipped toward you or pull you off balance.

Pruner Names and Terms

- *Bucking* - The process of cross-cutting a felled tree or log into lengths.
- *Motor Brake (if equipped)* - A device used to stop the saw chain when the trigger is released.
- *Pruner Powerhead* - A pruner without the saw chain and guide bar.
- *Drive Sprocket or Sprocket* - The toothed part that drives the saw chain.
- *Felling* - The process of cutting down a tree.
- *Felling Back Cut* - The final cut in a tree felling operation made on the opposite side of the tree from the notching cut.
- *Front Handle* - The support handle located at or toward the front of the pruner.
- *Front Hand Guard* - A structural barrier between the front handle of a pruner and the guide bar, typically located close to the hand position on the front handle.
- *Guide Bar* - A solid railed structure that supports and guides the saw chain.
- *Scabbard/Guide Bar Cover* - Enclosure fitted over guide bar to help prevent tooth contact when saw is not in use.
- *Kickback* - The backward or upward motion, or both of the guide bar occurring when the saw chain near the nose of the top area of the guide bar contacts any object such as a log or branch, or when the wood closes in and pinches the saw chain in the cut.
- *Kickback, Pinch* - The rapid pushback of the saw which can occur when the wood closes in and pinches the moving saw chain in the cut along the top of the guide bar.
- *Kickback, Rotational* - The rapid upward and backward motion of the saw which can occur when the moving saw chain near the upper portion of the tip of the guide bar contacts an object, such as a log or branch.
- *Limbing* - Removing the branches from a fallen tree.
- *Low-Kickback Chain* - A chain that complies with the kickback performance requirements of ANSI B175.1–2012 (when tested on a representative sample of pruners).
- *Normal Cutting Position* - Those positions assumed in performing the bucking and felling cuts.
- *Notching Undercut* - A notch cut in a tree that directs the tree's fall.
- *Rear Handle* - The support handle located at or toward the

- *Saw Chain* - A loop of chain having cutting teeth, used to cut wood, and that is driven by the motor and is attached to the guide bar.
- *Ribbed Bumper* - The ribs used when felling, to help pivot the saw and maintain position while sawing.
- *Switch* - A device that when operated will cause or interrupt an electrical power circuit to the motor.
- *Switch Linkage* - The mechanism that transmits motion from a trigger to the switch.
- *Switch Lockout* - A movable stop that prevents the unintentional operation of the switch until the lockout is removed.

Residual Risks

In spite of the application of the relevant safety standards and the implementation of safety devices, certain risks cannot be avoided. These are:

- Impairment of hearing.
- Risk of personal injury due to flying particles.
- Risk of burns due to accessories becoming hot during operation.
- Risk of personal injury due to prolonged use.

SAVE THESE INSTRUCTIONS

Chargers

DeWALT chargers require no adjustment and are designed to be as easy as possible to operate.

Electrical Safety

The electric motor has been designed for one voltage only. Always check that the battery pack voltage corresponds to the voltage on the rating plate. Also make sure that the voltage of your charger corresponds to that of your mains.

Important: Your DeWALT charger is double insulated in accordance with EN60335; therefore, no earthing is required.

If the supply cord is damaged, it must be replaced by DeWALT or an authorised service organisation.

Mains Plug Replacement (U.K. & Ireland Only)

If a new mains plug needs to be fitted:

- Safely dispose of the old plug.
 - Connect the brown lead to the live terminal.
 - Connect the blue lead to the neutral terminal.
- WARNING:** No connection is to be made to the earth terminal.

Follow the fitting instructions supplied with your plug.

English

Important Safety Instructions for All Battery Chargers

sAVE ThEsE insTRUCTiOns: This manual contains important safety and operating instructions for compatible battery chargers (refer to Technical Data).

- Before using charger, read all instructions and cautionary markings on charger, battery pack, and product using battery pack.
 - WARNING: Shock hazard. Do not allow any liquid to get inside charger. Electric shock may result.
 - WARNING: We recommend the use of a residual current device with a residual current rating of 30mA or less.
 - CAUTION: Burn hazard. To reduce the risk of injury, charge only D eWALT rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
 - CAUTION: Children should be supervised to ensure that they do not play with the appliance.
 - NOTICE: Under certain conditions, with the charger plugged into the power supply, the exposed charging contacts inside the charger can be shorted by foreign material. Foreign materials of a conductive nature such as, but not limited to, steel wool, aluminum foil or any buildup of metallic particles should be kept away from charger cavities. Always unplug the charger from the power supply when there is no battery pack in the cavity. Unplug charger before attempting to clean.
- DO NOT attempt to charge the battery pack with any chargers other than the ones in this manual. The charger and battery pack are specifically designed to work together.
- These chargers are not intended for any uses other than charging D eWALT rechargeable batteries. Any other uses may result in risk of fire, electric shock or electrocution.
- Do not expose charger to rain or snow.
- Pull by plug rather than cord when disconnecting charger. This will reduce risk of damage to electric plug and cord.
- Make sure that cord is located so that it will not be stepped on, tripped over, or otherwise subjected to damage or stress.
- Do not use an extension cord unless it is absolutely necessary. Use of improper extension cord could result in risk of fire, electric shock, or electrocution.
- Do not place any object on top of charger or place the charger on a soft surface that might block the ventilation slots and result in excessive internal heat. Place the charger in a position away from any heat source. The charger is ventilated through slots in the top and the bottom

reassembly may result in a risk of electric shock or fire.

- In case of damaged power supply cord, the cord must be replaced immediately by the manufacturer or a similar qualified person to prevent any hazard.
- Disconnect the charger from the outlet before attempting any cleaning. This will reduce the risk of electric shock. Removing the battery pack will reduce this risk.
- NEVER attempt to connect two chargers to the same outlet.
- The charger is designed to operate on standard 230V household electrical power. Do not use it on any other voltage. This does not apply to vehicular charger.

Charging a Battery (Fig. B)

nOTE: To ensure maximum performance and life of battery packs, charge the battery pack fully before use.

1. Plug the charger into an appropriate outlet and insert battery pack into the charger. The battery pack is fully seated in the charger. The light will blink repeatedly indicating that the charging process has started.
2. The Stage 1 charging blink indicator represents the charge process that charges the majority of the battery capacity. Stage 2 charging blink indicator represents the remainder, or top off charge process, for the battery to reach full capacity.
3. The completion of charge for Stage 1 or Stage 2 is indicated by the stage's light remaining ON continuously. The battery pack is fully charged when both Stage 1 and Stage 2 charging lights remain ON continuously. The battery pack may be removed and used at this time or left in the charger.

nOTE: To remove the battery pack, some chargers have a battery pack release button ¹⁷ to be pressed. Refer to the indicators below for the charge status of the battery pack.

Indicators

Stage 1 Charging

Stage 2 Charging

Fully Charged

Hot/Cold Pack Delay*

If the charger indicates a problem, take the charger and battery pack to be tested at an authorised service centre.

Hot/Cold Pack Delay

When the charger detects a battery pack that is too hot or too cold, it automatically starts a Hot/Cold Pack Delay, suspending charging until the battery pack has reached an appropriate temperature. The charger then automatically switches to the pack charging mode. This feature ensures maximum battery pack life.

A cold battery pack will charge at a slower rate than a warm battery pack. The battery pack will charge at that slower rate throughout the entire charging cycle and will not return to maximum charge rate even if the battery pack warms.

The DCB118 charger is equipped with an internal fan designed to cool the battery pack. The fan will turn on automatically when the battery pack needs to be cooled. Never operate the charger if the fan does not operate properly or if ventilation slots are blocked. Do not permit foreign objects to enter the interior of the charger.

Electronic Protection system

XR Li-Ion tools are designed with an Electronic Protection System that will protect the battery pack against overloading, overheating or deep discharge.

The tool will automatically turn off if the Electronic Protection System engages. If this occurs, place the lithium-ion battery pack on the charger until it is fully charged.

Wall Mounting

These chargers are designed to be wall mountable or to sit upright on a table or work surface. If wall mounting, locate the charger within reach of an electrical outlet, and away from a corner or other obstructions which may impede air flow. Use the back of the charger as a template for the location of the mounting screws on the wall. Mount the charger securely using drywall screws (purchased separately) at least 25.4 mm long with a screw head diameter of 7–9 mm, screwed into wood to an optimal depth leaving approximately 5.5 mm of the screw exposed. Align the slots on the back of the charger with the exposed screws and fully engage them in the slots.

Charger Cleaning Instructions

WARNING: Shock hazard. Disconnect the charger from the AC outlet before cleaning. Dirt and grease may be removed from the exterior of the charger using a cloth or soft non-metallic brush. Do not use water or any cleaning solutions. Never let any liquid get inside the tool; never immerse any part of the tool into a liquid.

Battery Packs

READ ALL INSTRUCTIONS

- **Do not charge or use battery in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Inserting or removing the battery from the charger may ignite the dust or fumes.**
- **Never force battery pack into charger. Do not modify the battery pack in any way to fit into a non-approved charger as battery pack may rupture and cause personal injury.**
- **Charge the battery packs only in Designated Work Areas.**
- **DO NOT splash or immerse in water or other liquids.**
- **Do not store or use the tool and battery in areas where the temperature may fall below 4 °C (40 °F) (such as outside sheds or metal buildings) or may reach or exceed 40 °C (104 °F) (such as outdoors in metal buildings in summer).**
- **Do not incinerate the battery pack even if it is damaged or is completely worn out. The battery pack may explode in a fire. Toxic fumes and materials may be released if lithium-ion battery packs are burned.**
- **If battery contents come into contact with skin, immediately wash area with mild soap and water. If battery liquid gets into the eye, rinse water for 15 minutes or until irritation ceases. If medical attention is needed, the battery electrolyte is composed of lithium salt, liquid organic carbonates and lithium salts.**
- **Contents of opened battery cells may cause skin irritation. Provide fresh air. If symptoms persist, seek medical attention.**

WARNING: Burn hazard. Battery liquid is highly flammable if exposed to spark or flame.

WARNING: Never attempt to open the battery pack for any reason. If battery pack case is cracked, do not insert into charger. Do not crush or puncture battery pack. Do not use a battery pack that has received a sharp blow, been dropped, or is damaged in any way (i.e., pierced with a sharp object, a hammer, stepped on). Electric shock may result. Damaged battery packs should be returned to a service centre for recycling.

WARNING: Fire hazard. Do not store battery pack so that metal objects can contact exposed battery terminals. For example, do not place the battery pack in aprons, pockets, tool boxes, drawers, etc., with loose nails, screws, or other metal objects.

CAUTION: When not in use, place the battery pack on a stable surface where it will not come into contact with

English

terminals are protected and well insulated from materials that could contact them and cause a short circuit. NOTE: Lithium-ion batteries should not be put in checked baggage.

DeWALT batteries comply with all applicable shipping regulations as prescribed by industry and legal standards which include UN Recommendations on the Transport of Dangerous Goods; International Air Transport Association (IATA) Dangerous Goods Regulations, International Maritime Dangerous Goods (IMDG) Regulations, and the European Agreement Concerning The International Carriage of Dangerous Goods by Road (ADR). Lithium-ion cells and batteries have been tested to section 38.3 of the UN Recommendations on the Transport of Dangerous Goods Manual of Tests and Criteria.

In most instances, shipping a DeWALT battery pack will be excepted from being classified as a fully regulated Class 9 Hazardous Material. In general, only shipments containing a lithium-ion battery with an energy rating greater than 100 Watt Hours (Wh) will require being shipped as fully regulated Class 9. All lithium-ion batteries have the Watt Hour rating marked on the pack. Furthermore, due to regulation complexities, DeWALT does not recommend air shipping lithium-ion battery packs alone regardless of Watt Hour rating. Shipments of tools with batteries (combo kits) can be air shipped as excepted if the Watt Hour rating of the battery pack is no greater than 100 Wh.

Regardless of whether a shipment is considered excepted or fully regulated, it is the shipper's responsibility to consult the latest regulations for packaging, labeling/marketing and documentation requirements.

The information provided in this section of the manual is provided in good faith and believed to be accurate at the time the document was created. However, no warranty, expressed or implied, is given. It is the buyer's responsibility to ensure that its activities comply with the applicable regulations.

Transporting the FIEXVOIT™ Battery

The DeWALT FLEXVOLT™ battery has two modes: Use and Transport.

Use Mode: When the FLEXVOLT™ battery stands alone or is in a DeWALT 18V product, it will operate as an 18V battery. When the FLEXVOLT™ battery is in a 54V or a 108V (two 54V batteries) product, it will operate as a 54V battery.

Transport Mode: When the cap is attached to the FLEXVOLT™ battery, the battery is in Transport mode. Keep the cap for shipping.

When in Transport mode, strings of cells are electrically disconnected within the pack

3 batteries of 36 Wh each. The Use Wh rating may be up to 108 Wh (1 battery implied).

Storage Recommendations

1. The best storage place is one that is cool and dry, away from direct sunlight and excess heat or cold. To maintain battery performance and life, store batteries at room temperature when not in use.
2. For long storage, it is recommended to store the battery pack in a cool, dry place out of the elements for optimal results.

NOTE: Battery packs should not be stored completely depleted of charge. The battery pack will need to be recharged before use.

Labels on Charger and Battery Pack

In addition to the pictographs used in this manual, labels on the charger and the battery pack may include the following pictographs:

	Read instruction manual before use.
	See Technical Data for charging time.
	Do not probe with conductive objects.
	Do not charge damaged battery packs.
	Do not expose to water.
	Have defective cords replaced immediately.
	Charge only between 4 °C and 40 °C.
	Only for indoor use.
	Discard the battery pack with due care to protect the environment.
	Charge battery packs only with designated chargers. Charging battery packs with non-designated DeWALT batteries with a non-designated charger may make them burst or leak.

Battery Type

The following tools operate on an 18-volt battery pack:
DCMPS520.

These battery packs may be used: DCB181, DCB182, DCB183, DCB184, DCB184B, DCB187, DCB189, DCB546, DCB547, DCB548, DCBP034, DCBP034G. Refer to Technical Data for more information.

Package Contents

The DCMPS520 package contains:

1 Pruning Saw

1 Guide Bar

1 20 cm Saw Chain

1 Guide Bar Cover

1 Wrench

1 Li-Ion battery pack (C1, D1, E1, G1, H1, L1, M1, P1, Q1, S1, T1, U1, X1, Y1, Z1 models)

2 Li-Ion battery packs (C2, D2, E2, G2, H2, L2, M2, P2, Q2, S2, T2, U2, X2, Y2, Z2 models)

3 Li-Ion battery packs (C3, D3, E3, G3, H3, L3, M3, P3, Q3, S3, T3, U3, X3, Y3, Z3 models)

1 Instruction manual

nOTE: Battery packs, chargers and kitboxes are not included with B models. Battery packs and chargers are not included with NT models. B models include Bluetooth® battery packs.

nOTE: The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth®, SIG, Inc. and any use of such marks by DeWALT under license. Other trademarks and trade names are those of their respective owners.

- Check for damage to the tool, parts or accessories which may have occurred during transport.
- Take the time to thoroughly read and understand this manual prior to operation.

Markings on Tool

The following pictograms are shown on the tool:

Read instruction manual before use.

Wear eye, ear and head protection.

Wear gloves.

Wear proper foot protection.

Always use two hands when operating the pruning saw.

Switch the tool off. Before performing maintenance on the tool, remove the battery from the tool.

99 Directive 2000/14/EC guaranteed safety

Date Code Position (Fig. A)

The production date code 24 consists of a 2-digit year followed by a 2-digit week and is extended by a 2-digit factory code.

Description (Fig. A)

WARNING: Never modify the power tool. Damage or personal injury could result.

- 1 Trigger switch
- 2 Lock-off lever
- 3 Front hand guard
- 4 Guide bar
- 5 Saw chain
- 6 Bar tip guard
- 7 Chain assembly cover
- 8 Bar lock nut
- 9 Chain tensioning screw
- 10 Oil level indicator
- 11 Oil cap
- 12 Guide bar cover
- 13 Wrench
- 14 Rear handle
- 15 Front handle
- 16 Battery pack
- 17 Battery pack release button

Intended Use

The DCMPS520 pruner saw is designed for cutting branches up to 15 cm in diameter. The pruner saw is not to be operated in a tree, on a ladder, from any unstable position. It should always be operated with two hands.

DO NOT use under wet conditions, during heavy rain or in presence of flammable liquids or gases.

DO NOT use in dark or foggy conditions. This tool must be used with sufficient light.

These pruners are professional power tools.

English

ASSEMBLY AND ADJUSTMENTS

WARNING: To reduce the risk of serious personal injury, turn tool off and disconnect battery pack before making any adjustments or removing/installing attachments or accessories. An accidental start-up can cause injury.

WARNING: Use only DeWALT batteries and chargers.

Inserting and Removing the Battery Pack from the Tool (Fig. B)

NOTE: Make sure your battery pack ¹⁶ is fully charged.

To Install the Battery Pack into the Tool Handle

1. Align the battery pack with the rails inside the tool's handle (Fig. B).
2. Slide it into the handle until the battery pack is firmly seated in the tool and ensure that you hear the lock snap into place.

To Remove the Battery Pack from the Tool

1. Press the battery release button ¹⁷ and firmly pull the battery pack out of the tool handle.
2. Insert battery pack into the charger as described in the charger section of this manual.

Fuel Gauge Battery Packs (Fig. B)

Some DeWALT battery packs include a fuel gauge which consists of three green LED lights that indicate the level of charge remaining in the battery pack.

To actuate the fuel gauge, press and hold the fuel gauge button ²⁰. A combination of the three green LED lights will illuminate designating the level of charge left. When the level of charge in the battery is below the usable limit, the fuel gauge will not illuminate and the battery will need to be recharged.

NOTE: The fuel gauge is only an indication of the charge left on the battery pack. It does not indicate tool functionality and is subject to variation based on product components, temperature and end-user application.

Installing the Guide Bar and Saw Chain (Fig. A, C–G)

CAUTION: Sharp chain. Always wear protective gloves when handling the saw chain. The saw chain is sharp and can cut you when it is not running.

WARNING: Sharp moving chain. To prevent accidental operation, ensure that battery is removed from the tool before performing the following operations. Failure to do this could result in serious personal injury.

If the saw chain ⁵ and guide bar ⁴ are packed separately in the

5. Ensure the saw chain is properly set in the ⁶ entire guide bar.
6. Place the saw chain around the sprocket ⁷ the slot on the guide bar with chain tensioner ¹⁸ the bolt ¹⁸, on the base of the tool as shown in Fig. C.
7. Once in place, hold the bar still, replace chain cover ⁷. Install the rear of the sprocket cover ⁷ it down and make sure the bolt hole on the cover ⁷ with the bolt ¹⁸ on the main housing.
8. Install the bar lock nut ⁸ and rotate clockwise with wrench ¹³ provided until snug, then lock turn, so that the saw chain can be properly tensioned.
9. Rotate the chain tensioning screw ⁹ tension as shown in Fig. D. Make sure the screw is snug around the guide bar ⁴. Tighten until snug.
10. Follow the instructions in the section Adjusting Chain Tension.

Adjusting Chain Tension (Fig. A, C, D)

WARNING: Incorrect saw chain tensioning can cause the saw chain to come off of the guide bar and cause serious injury or death.

NOTE: Saw chain tension should be adjusted before each use.

1. With the saw still on a firm surface check the tension. The tension is correct when the saw chain ⁵ back after being pulled 1/8" (3 mm) away from the bar ⁴ with light force from the middle finger ⁴ as shown in Fig. E. There should be no "saw" between the guide bar and the saw chain on the underside of the bar ⁴ Fig. F.
2. To adjust saw chain tension, loosen bar lock nut ⁸.
3. Rotate the chain tensioning screw ⁹ clockwise until snug using the flat screwdriver end of the wrench ¹³.
4. Check saw chain tension, adjust if needed.
5. Do not over-tension the saw chain as this will cause excessive wear and will reduce the life of the saw chain.
6. Once saw chain tension is correct, tighten bar lock nut ⁸ until snug. Torque the bar lock nut ⁸ to 10 ft-lb (13.5 Nm).
7. A new chain stretches slightly during the first use. It is important to check the tension after disconnecting battery remove the battery pack for the first two hours of use.

Replacing the Saw Chain (Fig. A, C, D)

WARNING: Sharp moving chain. To prevent accidental

1. Place the saw on a flat, firm surface.
2. Remove chain assembly cover ⁷ as described in *Installing the Guide Bar and Saw Chain section*.
3. To remove the saw chain ⁵, rotate the chain tensioning screw ⁹ in the front of the housing using the flat screwdriver end of the wrench. Turning the screw counterclockwise allows the guide bar ⁴ to recede and reduces the tension on the chain so that it may be removed.
4. Wearing protective gloves, grasp the saw chain and lift the worn saw chain out of the groove in the guide bar.
5. Ensure guide bar is installed with the bar tip guard ⁶ positioned as shown in Fig. E.
6. Place the new chain in the slot of the guide bar, making sure the saw teeth are facing the correct direction by matching the arrow and graphic of the saw chain on the chain assembly cover ⁷ shown in Fig. G.
7. Follow instructions for *Installing the Guide Bar and Saw Chain*.

Replacement chain and bar are available from your nearest authorized service center.

The DCMPS520 requires replacement 8" (203 mm) chain DT20693. Replacement 8" (203 mm) bar DT20694.

Saw Chain and Guide Bar Oiling (Fig. A)

Auto Oiling System

This pruner is equipped with an auto oiling system that keeps the saw chain and guide bar constantly lubricated.

1. The oil level indicator ¹⁰ shows the level of the oil in the pruner. If the oil level is less than a quarter full, remove the battery from the pruner and refill the oil tank with the correct type of oil.
2. Always empty oil tank when finished cutting.
3. Always empty oil tank before storing this unit.

nOTE: Do not operate this pruner without oil.

nOTE: Always use a high-quality, biodegradable bar and chain oil for proper saw chain and bar lubrication. When pruning trees, vegetable-based bar and chain oil is recommended, as mineral-based oils may harm living trees. Never use dirty, used, or contaminated oil. Doing so may damage the tool.

Filling the Oil Reservoir

1. Unscrew counterclockwise and then remove the oil cap ¹¹. Fill the reservoir with the recommended bar and chain oil until the oil level has reached the top of the oil level indicator ¹⁰.
2. Refit the oil cap and tighten clockwise.
3. Periodically switch the pruner off and check the oil

guide Bar Cover

1. To open the guide bar cover ¹², lift up and pull the two halves apart.
2. Fit the guide bar cover ¹² onto the guide bar ⁴ in Fig. A, H–J. Ensure that the retaining pin ²⁵ on the bar cover ¹² aligns with the retaining pin ²⁶ on the guide bar ⁴.
3. To close the guide bar cover ¹², close the cover and ensure the latch ²⁵ is secured to the notch ²⁶.

Wrench

1. Open the guide bar cover ¹² to gain access to the wrench ¹³.
2. Remove the wrench ¹³ by lifting the wrench end of the retaining clips ²⁸ away from the guide bar cover.
3. Store the wrench in the guide bar cover where the flat screwdriver end of the wrench fits into the slot ²⁷ and then press the wrench end down. The retaining clips ²⁸ firmly secure the wrench in place.

Bar Tip Guard (Fig. A)

WARNING: Never operate the pruner with the bar tip guard properly mounted on the guide bar to prevent rotational kickback.

The bar tip guard ⁶ reduces the chance of the guide bar ⁴ at the end of the guide bar ⁴ from coming into contact with objects which may cause the bar and saw chain to move towards the operator. In addition to reducing the chance of kickback, the bar tip guard ⁶ will reduce the chance of the chain from touching the ground.

Transporting Pruner (Fig. A, I)

- Always turn unit off, remove the battery and disconnect the bar ⁴ with the guide bar cover ¹² v. the pruner.

OPERATION

Instructions for Use

WARNING: Always observe the safety instructions and applicable regulations. **WARNING:** To reduce the risk of serious injury, turn tool off and disconnect battery before making any adjustments or installing attachments or accessories. Start-up can cause injury.

Proper Hand Position (Fig. A, K)

WARNING: To reduce the risk of serious injury, always use proper hand position.

English

Operating the Pruner (Fig. A)

WARNING: Read and understand all instructions. Failure to follow all instructions listed below may result in electric shock, fire and/or serious personal injury.

- Guard Against Kickback which can result in severe injury or death. See Important Safety Instructions Causes and Operator Prevention of Kickback, to avoid the risk of kickback.
- Do not overreach. Do not cut above chest height. Make sure your footing is firm. Keep feet apart. Divide your weight evenly on both feet.
- Use a firm grip with your left hand on the front handle ¹⁵ and your right hand on the rear handle ¹⁴ so that your body is to the left of the guide bar.

WARNING: Do not hold pruner by front hand guard.

Keep elbow of left arm locked so that left arm is straight to withstand a kickback.

WARNING: Never use a cross-handed grip (left hand on the rear handle and right hand on the front handle).

WARNING: Never allow any part of your body to be in line with the guide bar when operating the pruner.

- Never operate pruner while in a tree, in any awkward position or on a ladder or other unstable surface. You may lose control of pruner causing severe injury.
- Keep the pruner running at full speed the entire time you are cutting.
- Allow the chain to cut for you. Exert only light pressure. Do not put pressure on pruner at end of cut.

WARNING: When not in use always have the chain brake (if equipped) engaged, unit turned off and remove the battery pack.

WARNING: Never operate the pruner without the bar tip guard properly mounted on the guide bar to prevent rotational kickback.

ON/OFF Switch (Fig. A)

WARNING: Never attempt to lock a switch in the ON position.

Always be sure of your footing and grip the pruner firmly with both hands with the thumb and fingers encircling both handles.

1. To turn the unit on, push down on the lock-off lever ², shown in Fig. A, and squeeze the trigger switch ¹. Once the unit is running, you may release the lock-off lever.
2. To keep the unit running you must continue to squeeze the trigger switch ¹.
3. To turn the unit off, release the trigger switch ¹.

NOTE: If too much force is applied while making cut, pruner will turn off. To restart pruner, you must release lock-off lever ² and the trigger switch ¹ to restart. Begin your cut again, this time with less force. Pruner to cut at its own pace.

Common Cutting Techniques

Limbing

Removing the branches from a fallen tree. When making larger lower limbs to support the log off the ground, cut the small limbs in one cut. Branches under tension should be cut from the bottom of the branch towards the top to avoid binding the pruner as shown below. Trim limbs on one side keeping tree stem between you and pruner. Do not make cuts with pruner between your legs or straddle the log to be cut.

Bucking

WARNING: Recommend that first-time users practice cutting on a pruner horse.

Cutting a felled tree or log into lengths. How you cut depends on how the log is supported. Use a technique whenever possible as shown below.

1. Always start a cut with the pruner chain running at full speed.
2. Place the ribbed bumper ²¹ of the pruner against the log of the initial cut as shown below.

- 5. When the tree is supported along its entire length, make a cut from the top (overbuck), but avoid cutting the earth as this will dull your pruner quickly.

CUT FROM TOP (OVERBUCK)
AVOID CUTTING EARTH

21

- When supported at one end first, cut 1/3 the diameter from the underside (underbuck). Then make the finishing cut by overbuck to meet the first cut as shown below.

2nd CUT OVERBUCK
(2/3 DIAMETER)
TO MEET 1st CUT
(TO AVOID PINCHING)

1st CUT UNDERBUCK
(1/3 DIAMETER)
AVOID SPLINTERING

- When supported at both ends. First, cut 1/3 down from the top overbuck. Then make the finished cut by underbucking the lower 2/3 to meet the first cut as shown below.

1st CUT OVERBUCK
(1/3 DIAMETER)
TO AVOID SPLINTERING

2nd CUT UNDERBUCK
(2/3 DIAMETER)
TO MEET 1st CUT
(TO AVOID PINCHING)

- When on a slope always stand on the uphill side of the log. When "cutting through," to maintain complete control reduce the cutting pressure near the end of the cut without relaxing your grip on the pruner handles. Don't let the chain contact the ground. After completing the cut, wait for the pruner chain to stop before you move the pruner. Always stop the motor before moving from cut to cut.

installing attachments or accessories.
start-up can cause injury.

The charger and battery pack are not serviceable.

Lubrication

Refer to Auto Oiling System described in the
Guide Bar Oiling section.

Cleaning

WARNING: Electrical shock and mechanical injury may result if you do not disconnect the electrical appliance from the power source before cleaning.

WARNING: To ensure safe and efficient operation, always keep the electrical appliance and the Guide Bar Oiling slots clean.

WARNING: Never use solvents or other chemicals for cleaning the non-metallic parts of the tool. Use a cloth dampened only with water. Never let any liquid get inside the tool; it may damage the part of the tool into a liquid.

Ventilation slots can be cleaned using a dry, soft brush and/or a suitable vacuum cleaner. Do not use any cleaning solutions. Wear approved eye protection and an approved dust mask.

Saw Chain and Guide Bar

After every few hours of use, remove the chain from the guide bar and saw chain and clean thoroughly with a stiff bristle brush. Ensure oiling hole on bar is clear of debris.

Sprocket and Chain Assembly Cover (Fig. A, C–G)

CAUTION: Sharp chain. Always wear eye protection when handling the saw chain. The saw chain can cut you when it is not running.

WARNING: Sharp moving chain. To ensure safe operation, ensure the battery is removed before performing the following operation. This could result in serious personal injury.

1. Place the saw on a flat, firm surface.
2. Remove chain assembly cover as shown in Fig. 7 as described in the Guide Bar and Saw Chain section.
3. Wearing protective gloves, use a clean, soft cloth to wipe away any saw dust, sticks, vines or other debris that may have collected inside the chain assembly. Clean the area around the saw chain sprocket and guide bar.

English

7. Install the chain, guide bar and chain assembly cover as described in Installing the Guide Bar and Saw Chain, Replacing the Saw Chain sections and adjust chain tension properly before use as described in the Adjusting Chain Tension section.

Optional Accessories

WARNING: Since accessories, other than those offered by DeWALT, have not been tested with this product, use of such accessories with this tool could be hazardous. To reduce the risk of injury, only DeWALT-recommended accessories should be used with this product.

Consult your dealer for further information on the appropriate accessories.

Saw Chain Sharpening (Fig. L–N)

CAUTION: Sharp chain. Always wear protective gloves when handling the chain. The chain is sharp and can cut you when it is not running.

WARNING: Sharp moving chain. To prevent accidental operation, ensure that battery is removed from the tool before performing the following operations. Failure to do this could result in serious personal injury.

WARNING: Do not over file chain rakers, this will increase the risk of kickback. If the chain has been sharpened more than four times, replace it.

Each time the chain is sharpened, it loses some of the low kickback qualities and extra caution should be used.

It is recommended that a saw chain be sharpened no more than four times.

NOTE: The cutters will dull immediately if they touch the ground/dirt or a nail while cutting.

To get the best possible performance from your pruner it is important to keep the teeth of the saw chain sharp. Follow these helpful tips for proper saw chain sharpening:

1. For best results use a 11/64" (4.5 mm) file and a file holder or filing guide to sharpen your saw chain. This will ensure you always get the correct sharpening angles.
2. Place the file holder flat on the top plate and depth gauge of the cutter.
3. Keep the correct top plate  filing angle line of 30 ° on your file guide parallel with your chain (file at 60 ° from chain viewed from the side) as shown in Fig. L.
4. Sharpen cutters on one side of the chain first. File from the inside of each cutter to the outside. Then turn your saw around and repeat the processes (2, 3, 4) for cutters on the other side of the chain.

NOTE: Use a flat file to file the tops of the rakers (portion

Protecting the Environment

Separate collection. Products and batteries with this symbol must not be disposed of as household waste.

W Products and batteries contain materials that should be recovered or recycled, reducing the demand for new resources. Please recycle electrical products and batteries in accordance with local provisions. Further information is available at www.dewalt.com.

Rechargeable Battery Pack

This long-life battery pack must be recharged when it is discharged. To produce sufficient power on jobs that were easily done, the battery pack at the end of its technical life, discard it with due care for environmental protection.

- Run the battery pack down completely, to the point where the tool will not operate.
- Li-Ion cells are recyclable. Take them to your local recycling station. The collected batteries will be recycled or disposed of properly.
