Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Working on your com

Topics:

- After working inside your computer

Before working inside your computer

About this task

To avoid damaging your computer, perform the following steps before you begin working inside the computer.

Steps

- 1. Ensure that your work surface is flat and clean to prevent the computer cover from being scratched.
- 2. Turn off your computer (see Turning off your computer).

CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

- 3. Disconnect all network cables from the computer.
- 4. Disconnect your computer and all attached devices from their electrical outlets.
- 5. Press and hold the power button while the computer is unplugged to ground the system board.
- Remove the cover.

CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted me surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

Turning off your computer

After working inside your computer

About this task

After you complete any replacement procedure, ensure that you connect any external devices, cards, and cables before tu on your computer.

Steps

1. Replace the cover.

CAUTION: To connect a network cable, first plug the cable into the network device and then plug it into the computer.

Removing and installing compor

This section provides detailed information on how to remove or install the components from your computer.

Recommended tools

Removing the cover

Steps

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. To remove the cover:
 - a. Slide the blue retention tab to the right to unlock the cover [1].
 - b. Slide the cover toward the back of the computer [2].
 - c. Lift the cover from the computer [3].

Installing the cover

Steps

- 1. Place the cover on the computer and slide the cover until it clicks into place.
- 2. Follow the procedure in After Working Inside Your Computer

Removing the front bezel

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the cover.
- 3. To remove the front bezel:
 - a. Lift the tabs to release the front bezel from the computer [1].
 - b. Remove the front bezel from the computer [2].

Installing the front bezel

Steps

- 1. Insert the tabs on the bezel into the slots on the computer.
- 2. Press the bezel until the tabs clicks into place.
- 3. Install the cover.
- 4. Follow the procedure in After Working Inside Your Computer

Removing the fan duct

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the cover.
- 3. To remove the fan duct:
 - a. Holding the touch points, pull the fan duct bracket to release the fan duct [1].
 - b. Lift the fan duct away from the computer [2].

Installing the fan duct

Steps

- 1. Align the slots on the fan duct, with the screws on the heat sink.
- 2. Insert the fan duct until it clicks into place.
- 3. Install the cover.
- 4. Follow the procedure in After Working Inside Your Computer.

Removing the memory module

Steps

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. fan duct
 - c. hard drive assembly
 - d. optical drive
- 3. To remove the memory module:
 - a. Press the memory module retention tabs on both sides of the memory module.
 - b. Lift the memory module from the memory module connector on the system board.

Installing the memory module

Steps

- 1. Align the notch on the memory module with the tab on the memory module connector.
- 2. Insert the memory module into the memory module socket.
- 3. Press the memory module until the memory module retention tabs click into place.
- 4. Install the:
 - a. optical drive
 - b. hard drive assembly
 - c. fan duct
 - d. cover

. the man and the After Mentine Institut Nove

- 2. Remove the:
 - a. cover
 - b. fan duct
- 3. To remove the intrusion switch:
 - a. Disconnect the intrusion switch cable from the connector on the system board [1][2].
 - b. Slide the intrusion switch and lift it away from the computer [3].

Installing the intrusion switch

Steps

- 1. Insert the intrusion switch into the slot on the chassis.
- 2. Connect the intrusion switch cable to the system board.
- 3. Install the:
 - a. fan duct
 - b. cover
- 4. Follow the procedure in After Working Inside Your Computer.

Removing the expansion card

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. fan duct
- 3. To remove the expansion card:
 - a. Pull the metal tab to open the expansion card latch [1].
 - b. Pull the tab forward [2] and pull the expansion card from the connector on the computer [3].

Installing the expansion card

Steps

- 1. Insert the expansion card into the connector on the system board.
- 2. Press the expansion card until it clicks into place.
- 3. Close the expansion card latch and press it until it clicks into place.
- 4. Install the:
 - a. fan duct
 - b. cover
- 5. Follow the procedure in After Working Inside Your Computer.

Removing the hard drive assembly

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. fan duct
- $\ensuremath{\mathsf{3}}.$ To release the hard drive assembly:
 - a. Push the retention tabs and remove the power connector [1,2].
 - b. Disconnect the data and power cables from the hard drives [3, 4].

- 4. To remove the hard drive assembly:
 - a. Pull the hard drive release handle forward to release the hard drive bracket from the computer [1].
 - b. Lift the hard drive assembly away from the computer [2].

Removing the hard drive from the hard drive

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. bezel
 - c. hard drive assembly
- 3. To remove the hard drive bracket:
 - a. Pull the hard drive bracket to release the hard drive [1].
 - b. Lift the hard drive out of the hard drive bracket [2].

- b. bezel
- c. cover
- 3. Follow the procedure in After Working Inside Your Computer.

Installing the hard drive assembly

Steps

- 1. Insert the hard drive assembly into the slot on the computer.
- 2. Connect the power cable to the slot on the hard drive bracket.
- 3. Install the:
 - a. fan duct
 - b. cover
- 4. Follow the procedure in After Working Inside Your Computer.

Removing the optical drive

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. front bezel
 - c. hard drive assembly
- 3. To release the optical drive:
 - a. Remove the hard drive connector cables from the optical drive latch [1].
 - b. Slide the blue latch to the unlock position [2].

- 5. To remove the optical drive from the optical drive cage:
 - a. Press the optical drive release latch [1] and slide the optical drive forward. [2]
 - b. Remove the optical drive from the optical drive cage [3].

Installing the optical drive

- 1. Slide the optical drive into the optical drive cage.
- 2. Align the tabs on the optical cage with the slots on the computer.
- 3. Lower the optical drive cage into the computer and lock the latch.

Removing the system fan

Steps

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. front bezel
 - c. hard drive assembly
 - d. optical drive
- 3. To remove the system fan:
 - a. Disconnect the system fan cable from the system board [1].
 - b. Slide the fan grommets toward the slot on the back wall [2].
 - c. Lift the fan away from the computer. [3]

Installing the system fan

Steps

- 1. Place the system fan in the computer.
- 2. Pass the grommets through the chassis and slide outward along the groove to secure it in place.
- 3. Connect the system fan cable to the system board.
- 4. Install the:
 - a. optical drive
 - b. hard drive assembly
 - c. front bezel
 - d. cover
- 5. Follow the procedure in After Working Inside Your Computer.

Removing the heat sink assembly

- d. hard drive assembly
- e. optical drive
- 3. To remove the heat sink assembly:
 - a. Disconnect the heat sink cable from the system board. [1]
 - b. Loosen the captive screws that secure the heat sink assembly and lift it away from the computer [2] [3].

Installing the heat sink assembly

Steps

- 1. Place the heat sink assembly onto the processor.
- 2. Tighten the captive screws to secure the heat sink assembly to the system board.
- 3. Connect the heat sink cable to the system board.
- 4. Install the:
 - a. fan duct
 - b. optical drive
 - c. hard drive assembly
 - d. front bezel
 - e. cover
- 5. Follow the procedure in After Working Inside Your Computer.

Removing the processor

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover

c. Lift the processor out of the socket [3].

Installing the processor

Steps

- 1. Align the processor with the socket keys.
- 2. Align the pin-1 indicator of the processor with the triangle on the socket.
- 3. Place the processor on the socket such that the slots on the processor align with the socket keys.
- 4. Close the processor shield by sliding it under the retention screw.
- 5. Lower the socket lever and push it under the tab to lock it.
- 6. Install the:
 - a. heat sink
 - b. fan duct
 - c. optical drive
 - d. hard drive assembly
 - e. front bezel
 - f. cover
- 7. Follow the procedure in After Working Inside Your Computer.

Removing the VGA daughter board

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. fan duct
- 3. To remove the VGA daughter board:
 - a. Remove the screws that secure the VGA connector to the computer [1].
 - b. Slide the VGA connector to release it from the computer [2].
 - c. Remove the screw that secures the VGA daughter board to the computer [3].
 - d. Lift the VGA daughter board using the handle to remove it from the computer [4].

Installing the VGA daughter board

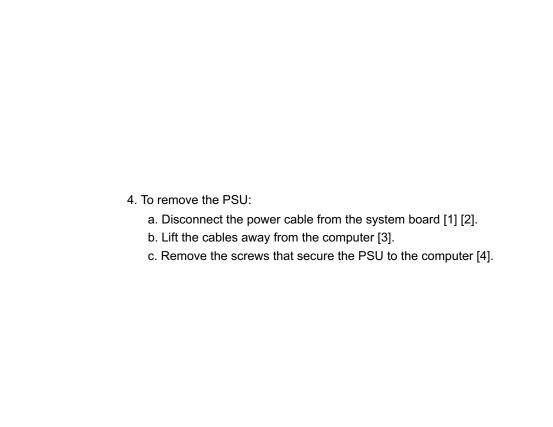

Steps

- 1. Align the VGA daughter board with the screw holder on the system board.
- 2. Tighten the screw to secure the VGA daughter board to the system board.
- 3. Insert the VGA connector into the slot at the back of the computer.
- 4. Tighten the screws to secure the VGA connector to the computer.
- 5. Install the:
 - a. fan duct
 - b. cover
- 6. Follow the procedure in After Working Inside Your Computer.

Removing the power supply unit (PSU)

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. front bezel
 - c. hard drive assembly
 - d. optical drive
 - e. fan duct
- 3. To release the PSU:
 - a. Disconnect the power cable from the system board [1] [2].
 - b. Unroute the power cables from the retention clips on the chassis [3] [4].

5. Press the blue release tab [1], slide the PSU and lift it away from the computer [2].

Installing the power supply unit (PSU)

Steps

- 1. Insert the PSU in the chassis and slide it toward the back of the computer to secure it.
- 2. Tighten the screws to secure the PSU to the back of the computer.
- 3. Route the PSU cables through the retention clips.
- 4. Connect the power cables to the system board.
- 5. Install the:
 - a. fan duct
 - b. optical drive
 - c. hard drive assembly
 - d. front bezel
 - e. cover
- 6. Follow the procedure in After Working Inside Your Computer.

Removing the power switch

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. front bezel
 - c. hard drive assembly
 - d. optical drive
 - e. power supply unit

Installing the power switch

Steps

- 1. Slide the power switch module into the slot on the chassis until it clicks into place.
- 2. Connect the power switch cable to the connector on the system board.
- 3. Install the:
 - a. power supply unit
 - b. optical drive
 - c. hard drive assembly
 - d. front bezel
 - e. cover
- 4. Follow the procedure in After Working Inside Your Computer.

Removing the SD card reader

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - a. cover
 - b. front bezel
 - c. hard drive assembly
 - d. optical drive
 - e. power supply unit
- 3. To remove the SD card reader:
 - a. Remove the power supply unit cables from the retention clips on the SD card reader enclosure [1].
 - b. Remove the screws that secure the SD card reader and lift it away from the computer [2] [3].

Installing the SD card reader

Steps

- 1. Place the SD card reader on the chassis.
- 2. Tighten the screws that secure the SD card reader to the computer.
- 3. Route the power supply unit cables into the retention clips.
- 4. Install the:
 - a. power supply unit
 - b. optical drive
 - c. hard drive assembly
 - d. front bezel
 - e. cover
- 5. Follow the procedure in After Working Inside Your Computer.

Installing the optional SSD card

- 1. Remove the:
 - a. cover
 - b. front bezel
- 2. Peel the adhesive tape (blue) from the rubber.

- 3. Place the rubber on the computer [1] and peel the adhesive tape (pink) from the rubber [2].
- 4. To install the SSD card:
 - a. Connect the SSD card to the connector on the system board [1].
 - b. Tighten the screw to secure the SSD card to the system board [2].

Removing the optional SSD card

- 1. Follow the procedure in Before Working Inside Your Computer.
- 2. Remove the:
 - cover
 - front bezel
- 3. Remove the screw that secures the SSD card to the system board. $\label{eq:screw}$
- 4. Disconnect the SSD card from the connector on the system board.
- 5. Remove the rubber from the system board.

- a. cover
- b. fan duct
- c. front bezel
- d. memory module
- e. hard drive assembly
- f. optical drive
- g. expansion card
- h. optional SSD card
- i. SD card reader
- j. VGA daughter board
- k. heat sink
- I. processor
- 3. To remove the I/O panel:
 - a. Remove the screw that secures the I/O panel to the chassis [1].
 - b. Remove the I/O panel from the computer [2].

4. Disconnect all the cables connected to the system board.

Installing the system board

- 1. Hold the system board by its edges and angle it toward the back of the computer.
- 2. Lower the system board into the computer until the connectors at the back of the system board align with the slots on t back wall of the computer, and the screw holes on the system board align with the standoffs on the computer.
- 3. Tighten the screws that secure the system board to the computer.
- 4. Connect the cables to the system board.
- 5. Install the:
 - a. VGA daughter board
 - b. SD card reader
 - c. optional SSD card
 - d. expansion card
 - e. processor
 - f. heat sink
 - g. optical drive
 - h. hard drive assembly
 - i. memory module
 - j. front bezel
 - k. fan duct
 - I. cover
- 6. Place the I/O panel on the chassis.
- 7. Tighten the screws to secure the I/O panel to the chassis.
- 8. Follow the procedure in After Working Inside Your Computer.

System board layout

- 1. PClex16 connector
- 3. RJ-45/USB 2.0 connector

- Accessing System Setup
- System Setup options
- Updating the BIOS
- System and setup password

Boot Sequence

Boot Sequence allows you to bypass the System Setup-defined boot device order and boot directly to a specific device (fo example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu optior are:

- Removable Drive (if available)
- STXXXX Drive

NOTE: XXX denotes the SATA drive number.

- Optical Drive
- Diagnostics

NOTE: Choosing Diagnostics, will display the ePSA diagnostics screen.

The boot sequence screen also displays the option to access the System Setup screen.

Navigation keys

The following table displays the system setup navigation keys.

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you rethe system.

Tab Moves to the next focus area.

NOTE: For the standard graphics browser only.

Esc Moves to the previous page till you view the main screen. Pressing Esc in the main screen d

message that prompts you to save any unsaved changes and restarts the system.

F1 Displays the System Setup help file.

System Setup overview

System Setup allows you to:

- Change the system configuration information after you add, change, or remove any hardware in your computer.
- Set or change a user-selectable option such as the user password.
- Read the current amount of memory or set the type of hard drive installed.

Before you use System Setup, it is recommended that you write down the System Setup screen information for future reference.

CAUTION: Unless you are an expert computer user, do not change the settings for this program. Cer changes can cause your computer to work incorrectly.

Accessing System Setup

Steps

- 1. Turn on (or restart) your computer.
- 2. After the white Dell logo appears, press F2 immediately.

The System Setup page is displayed.

NOTE: If you wait too long and the operating system logo appears, wait until you see the desktop. Then, shut or restart your computer and try again.

NOTE: After the Dell logo appears, you can also press F12 and then select BIOS setup.

System Setup options

NOTE: Depending on the computer and its installed devices, the items listed in this section may or may not appear

Table 6. General

Option Description

Mark all Entries

Table 19. Advanced configurations

Option Description

Updating the BIOS

Prerequisites

It is recommended to update your BIOS (System Setup), on replacing the system board or if an update is available. For la ensure that your computer battery is fully charged and connected to a power outlet

Steps

- 1. Restart the computer.
- 2. Go to Dell.com/support.
- 3. Enter the Service Tag or Express Service Code and click Submit.

NOTE: To locate the Service Tag, click Where is my Service Tag?

NOTE: If you cannot find your Service Tag, click Detect My Product. Proceed with the instructions on sc

- 4. If you are unable to locate or find the Service Tag, click the Product Category of your computer.
- 5. Choose the Product Type from the list.
- 6. Select your computer model and the Product Support page of your computer appears.
- Click Get drivers and click View All Drivers.The Drivers and Downloads page opens.
- 8. On the Drivers and Downloads screen, under the Operating System drop-down list, select BIOS.
- 9. Identify the latest BIOS file and click Download File.
 - You can also analyze which drivers need an update. To do this for your product, click Analyze System for Updates an follow the instructions on the screen.
- 10. Select your preferred download method in the Please select your download method below window, click Down The File Download window appears.
- 11. Click Save to save the file on your computer.
- 12. Click Run to install the updated BIOS settings on your computer.

Follow the instructions on the screen.

Next steps

NOTE: It is recommended not to update the BIOS version for more than 3 revisions. For example: If you want to up BIOS from 1.0 to 7.0, then install version 4.0 first and then install version 7.0.

System and setup password

You can create a system password and a setup password to secure your computer.

Password Description type

System password Password that you must enter to log on to your system.

Setup password Password that you must enter to access and make changes to the BIOS settings of your compu

CAUTION: The password features provide a basic level of security for the data on your computer.

Assigning a system password and setup password

Prerequisites

You can assign a new System Password and/or Setup Password or change an existing System Password and/or Password only when Password Status is Unlocked. If the Password Status is Locked, you cannot change the Sys Password.

NOTE: If the password jumper is disabled, the existing System Password and Setup Password are deleted and you provide the system password to log on to the computer.

About this task

To enter the system setup, press F2 immediately after a power-on or re-boot.

Steps

- 1. In the System BIOS or System Setup screen, select System Security and press Enter. The System Security screen appears.
- 2. In the System Security screen, verify that Password Status is Unlocked.
- 3. Select System Password, enter your system password, and press Enter or Tab.

Use the following guidelines to assign the system password:

- A password can have up to 32 characters.
- The password can contain the numbers 0 through 9.
- Only lower case letters are valid, upper case letters are not allowed.
- Only the following special characters are allowed: space, ("), (+), (,), (-), (.), (/), (;), ([), (\), (]), (\).

Re-enter the system password when prompted.

- 4. Type the system password that you entered earlier and click OK.
- 5. Select Setup Password, type your system password and press Enter or Tab. A message prompts you to re-type the setup password.
- 6. Type the setup password that you entered earlier and click OK.
- 7. Press Esc and a message prompts you to save the changes.
- 8. Press Y to save the changes.

The computer reboots.

Deleting or changing an existing system and/or setup pa

Prerequisites

Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the ex System and/or Setup password. You cannot delete or change an existing System or Setup password, if the Password.

About this task

To enter the System Setup, press F2 immediately after a power-on or reboot.

Steps

1. In the System BIOS or System Setup screen, select System Security and press Enter. The System Security screen is displayed.

6. Press Y to save the changes and exit from System Setup. The computer reboots.

Contactin

Prerequisites

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, pull, or Dell product catalog.

About this task

Dell provides several online and telephone-based support and service options. Availability varies by country and product, a some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Steps

- 1. Go to Dell.com/support.
- 2. Select your support category.
- 3. Verify your country or region in the Choose a Country/Region drop-down list at the bottom of the page.
- 4. Select the appropriate service or support link based on your need.
